

# PEDESTRIAN COLLISION AVOIDANCE SYSTEM

Save lives by monitoring your blind spots!

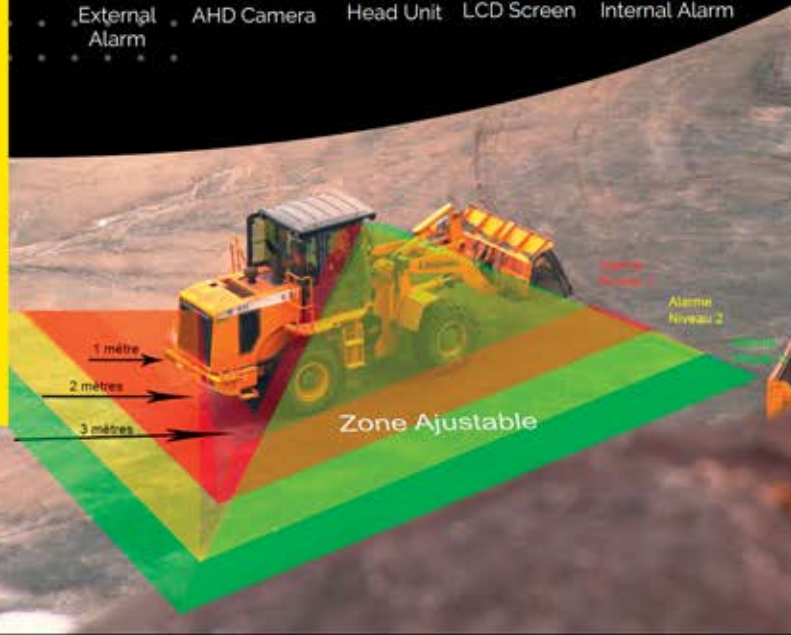

SoftSystems, in collaboration with Vinci Construction Terrassement, has developed a new system, **AI based**, which **exclusively detects pedestrians** according to a preset detection area.

Internal and external alarms are activated to warn simultaneously the driver in his cabin and the pedestrians that they are in a dangerous zone.

## CONFIGURATION

Once the cameras are installed on the vehicle, the configuration of the detection areas around the vehicle is done via the mobile app.

## Lifeguard Kit

## Fast & easy setup

Set up is done by technicians, assisted by SoftSystems' hotline. User's manuals are supplied with the kit.

## Delivery

For 10 devices or more to a single address, a carrier will complete the delivery.

**Packaging** : One kit per box or group the devices per types into boxes.

## QUICK INSTALLATION

- 1 camera port on on the head unit for each camera (AHD)
- 1 monitor port (CVBS)
- 1 external alarm port
- 1 internal alarm port
- 3 power supply cables are supplied for the head unit (+, -, ACC)
- Wifi antenna for the head unit

To be connected to the central unit

- Camera and 1 extension cord of 15 meters
- External alarm connected to a 15 meter cable
- Internal alarm connected to a 2.5 meter cable
- 7" LCD screen and a 3 meters extension
